

How To Use Ekaya instead of Keyman:

1. Select the keyboard on the bottom right taskbar and choose Ekaya Input Method

(Faster Method: just press Cntrl and Shift and it will change automatically to Ekaya)

2. Press the Kayah "k" button and you can choose which keyboard you want to use (like Keyman does). Or for the faster method: just press Cntrl Shift Space Bar and it will change between fonts.
